

## LITERATURE

PAPER TITLE	AUTHOR	OBJECTIVE / OUTCOME
eExpense: A Smart Approach to Track Everyday Expense	Shahed Anzarus Sabab, Sadman Saumik Islam, Jewel Rana, Monir Hossain	eExpnese is an application that runs on Android smartphones. By using this application, users can save their expense by simply scanning the bills or receipt copies. It also monitors user's income by tracking the received SMS's from the user's saving accounts.
Smart Expense Management Model for Smart Homes	Sumit Yadav, Richa Malhotra, Jyoti Tripathi	Integration of smart home with expense management system, increases the efficiency and effectiveness in the task of maintaining household budget.
Development of an Application for Expenses Accounting	Denis E. Yurochkin, Anton A. Horoshiy, Saveliy A. Karpukhin	A mobile application that helps to keep tracking your expenses and control your budget. Its works as follows: a receipt is scanned by a phone camera, preprocessing image. Then the text on the image is recognized, the needed data is selected and saved to database.
Analytical Expense Management System	Zeki Bozkus, Christophe Bisson, Taner Arsan	Expense management software is widely spread in companies and most of time supported by their intranet. These solutions are quite simple as they mainly collect the information related to the expenses and may propose a simple aggregation of these figures. The result is close to what an excel sheet provides.
